

# Healthcare Security Strategy

INTEGRATED SECURITY FOR A NEW ERA

  
**Salwa Rafee**

WW Security Industry Leader, Healthcare & Life Sciences

October 2017

# AGENDA

- **Healthcare Security: Status, Cyber Attacks, Maturity**
- **Compliance & Regulations**
- **IBM's Security POV**
- **How do we start this journey together ...**

# Cybersecurity is a universal challenge

What our customers are facing...

GDPR fines can cost

**billions**

for large global companies

By 2022, there will be

**1.8 million**

unfulfilled cybersecurity positions

Organizations are using

**too many**

tools from too many vendors

# Healthcare Security Pain Points

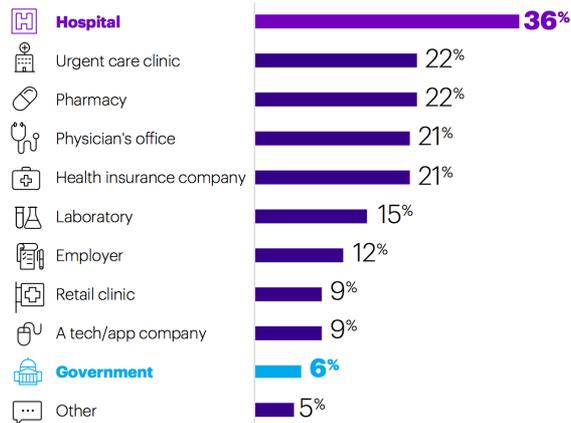

- **Data sharing is the foundation for digital transformation.. Security is a critical enabler**
  - Data no longer behind the data center walls- healthcare requires data be pervasive and widely shared.
  - We need to strike a balance between security and ease of access
- **Security Trends and Challenges:**
  - Ransomware attacks
  - Historical underinvestment (Security spend 3% of IT budget vs. 10% in all other industries)
  - Dependencies on business associates and 3<sup>rd</sup> parties
  - Medical devices that can't be patched (FDA requirement)
  - Limited access to technical resources

# Data walks... We need to follow and protect

- 1 in 4 consumers have had PHI stolen
- 25% Changed Healthcare Providers
- 21% Changed Payers / Insurance

**FIGURE 4. Digital healthcare data breaches are occurring across a variety of locations.**

# External attackers are holding Healthcare Organizations hostage while insiders are exposing patient data to the outside

## INTERNALLY...

**55%** of healthcare providers view **NEGLIGENT INSIDERS** as a significant future threat

**34%** of healthcare providers view **MALICIOUS ATTACKS** as a significant future threat

## EXTERNALLY...

**69%** of healthcare providers view **RANSOMWARE** as a significant future threat

**>50%** of hospitals have been **HIT WITH RANSOMWARE** over the last 12 months

# No industry has more costly data breaches than Healthcare

**AVERAGE  
TOTAL COST  
of a data breach**

**\$4 MILLION**

**AVERAGE COST  
of a lost or  
stolen record**

All industries

**\$158**

Healthcare

**\$355**

**CHURN RATE  
resulting from  
a data breach**

All industries

**2.8%**

Healthcare

**5.3%**

“2016 Cost of Data Breach Study, Global Analysis,” Ponemon Institute, June 2016.

## Cyberattacks: The next healthcare Epidemic

Forbes published data from the Office for Civil Rights (a branch under the U.S. Department of Health and Human Services), showing that medical information of nearly 30% of the U.S. population were at risk due to Anthem's breach, which accounted for 78M penetrated records in February 2015.

**Ottawa Hospital** hit with ransomware, information on four computers locked down, March 2016

## Hollywood hospital pays \$17,000 in bitcoin to hackers; FBI investigating

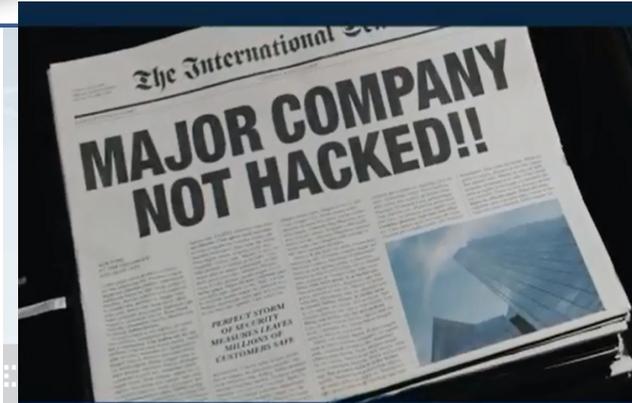

Feb 5, 2016, Hollywood Presbyterian Hospital paid \$17,000 in bitcoin to ransomware attackers to unlock files.

**NHS** tops the list for serious data breaches in 2017: Breaches ranged from losing hardware like a USB key or printed copies of patient information for example, to uploading sensitive information to websites, to technical failures and hacking.

**BREAKING: Individuals**

Phoenix-based Banner Health, one of the largest healthcare systems in the U.S., announced on August 3, 2016 that it is notifying approximately 3.7M individuals about a breach in which cyber attackers gained unauthorized access to computer systems that process payment card data at certain Banner locations.

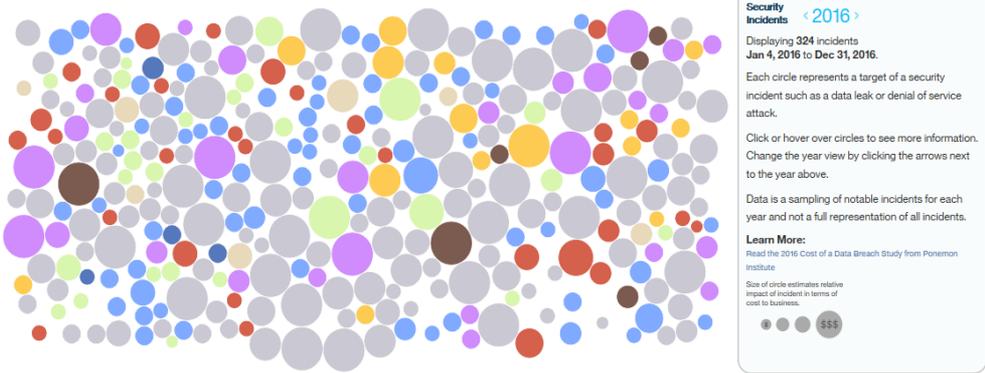

# IBM's Publications on Healthcare Security:

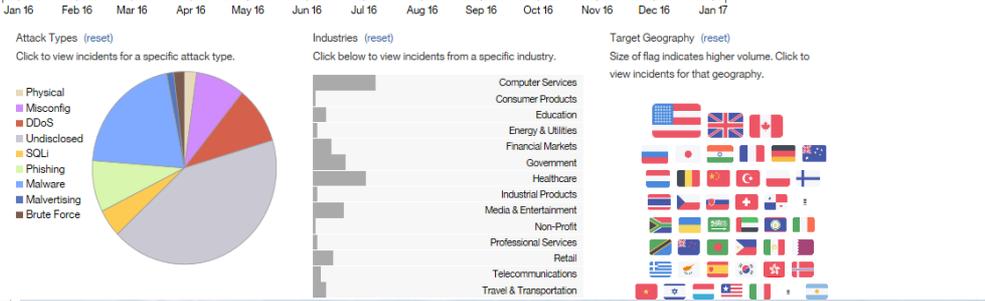

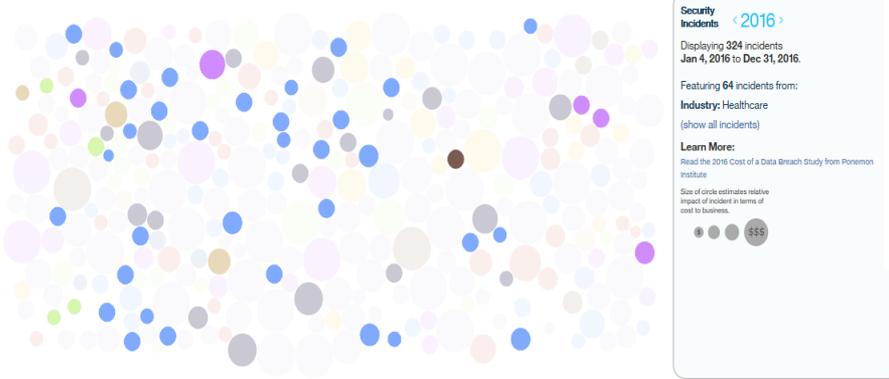

# Live XF Interactive Security Incidents

Malware represents **20%** across all industries, it is **52%** in Healthcare

## Security Incidents

## Security Incidents

Healthcare Organizations are becoming more data-centric and it is important to understand their top security drivers:

1. Regulatory and compliance alignment
2. Standard security frameworks, detection capabilities and response controls
3. Rigorous monitoring of regulatory changes
4. Access management
5. Network security
6. Data protection and encryption
7. Application security
8. Visibility and intelligence
9. Workload-centric capabilities
10. Cloud-agnostic managed security services

# Regulators expect the same level of control in a cloud environment

**HITRUST**

**PIPEDA**

Personal Information Protection  
and Electronic Documents Act

EU General Data Protection Regulation  
**GDPR**

**Regulators require Healthcare Organizations to review the following before deciding to use cloud services:**

- Location of data and the related legal jurisdiction
- Identity and access management
- Auditability
- Availability
- Data classification
- Encryption management
- Security incident management
- Business continuity

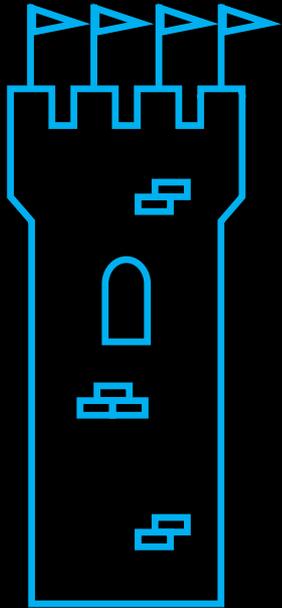

IBM SECURITY IN THE HEALTHCARE INDUSTRY

# IBM Security: Our POV

# How do you evolve your security program for the future?

**LAYERED  
DEFENSES**

**INTELLIGENCE  
and INTEGRATION**

**COGNITIVE, CLOUD,  
and COLLABORATION**

# The future of security is **Cognitive**

What if you could accelerate  
what analysts do each day?

## **Investigate threats faster**

Automatically triage incidents with  
the help of artificial intelligence

## **Be more accurate**

Correctly identify evolving threats,  
with a vast corpus of knowledge

## **Interpret unstructured data**

Draw from millions of security documents

# The future of security is **Cloud**

Can you confidently say yes  
to digital transformation?

## **Accelerate innovation**

Access one of the largest cloud-based  
security portfolios in the world

## **Protect multiple clouds**

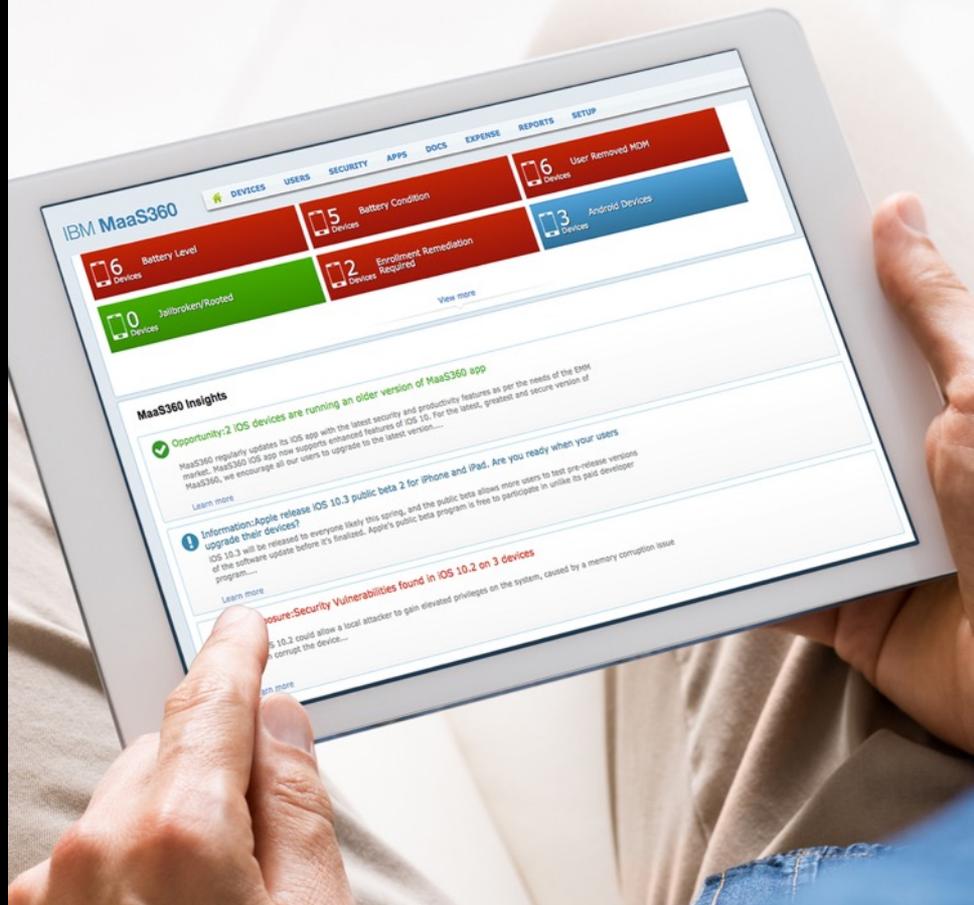

Use 25+ hybrid cloud security  
offerings, built for the enterprise

## **Use a proven platform**

270M+ endpoints connected to our cloud

IBM MaaS360  
IBM QRadar on Cloud  
IBM Trusteer  
IBM AppSec on Cloud

IBM Security App Exchange  
IBM X-Force Exchange  
IBM IDaaS  
Data Security on Cloud

# The future of security is **Collaboration**

Are you part of the bigger picture?

## **Orchestrate responses**

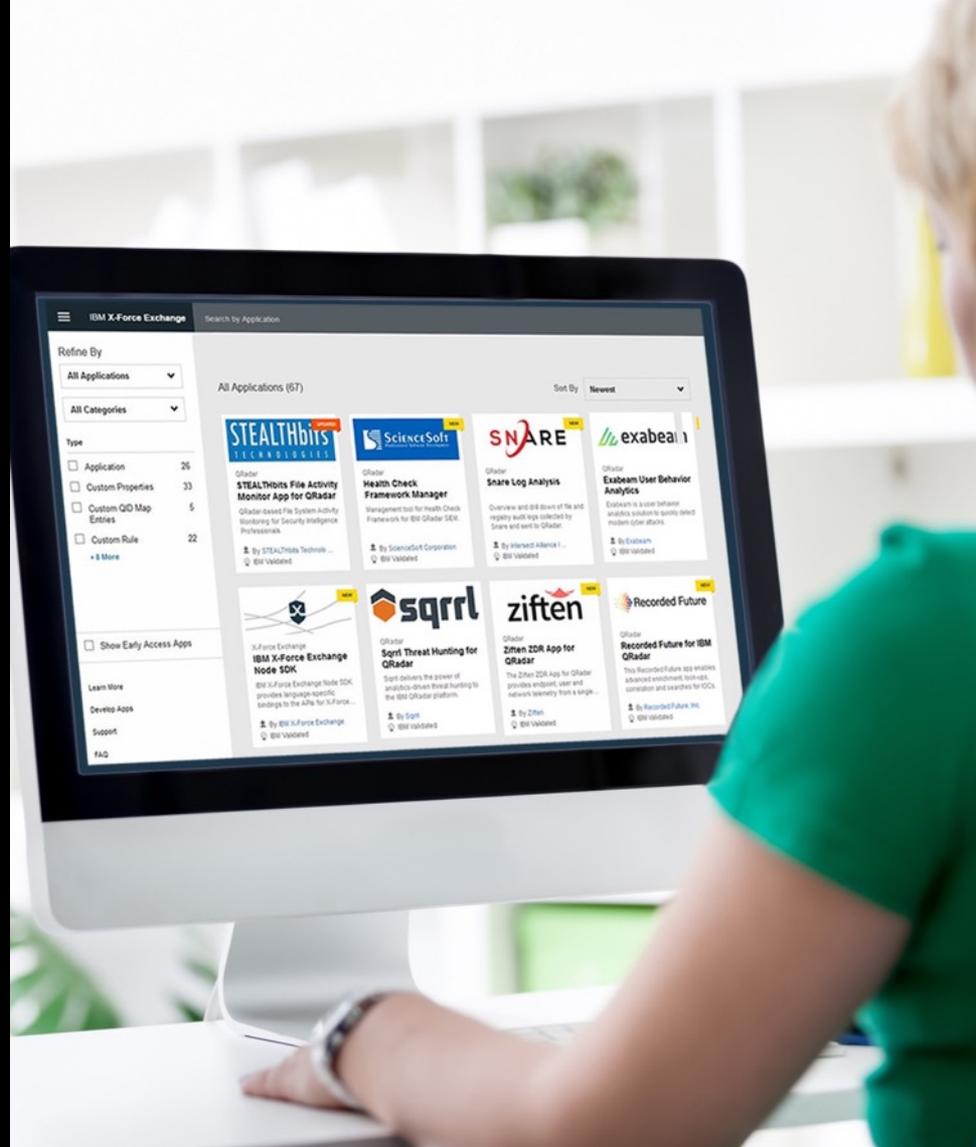

Respond to threats in minutes  
instead of hours with IBM Resilient

## **Share knowledge**

Interact with 41K+ X-Force Exchange  
users and 800+ TB of threat intelligence

## **Tailor your defenses**

Customize security with 100+ apps  
on the IBM Security App Exchange

# Security Offerings 2018

Immune System

Incident Response

Ransomware

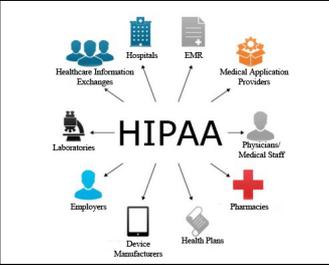

Watson for Cyber Security

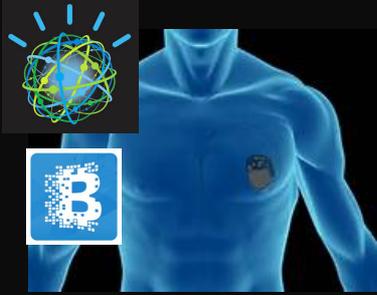

Secure Medical Imaging

Secure EMR  
(Epic, Cerner, Allscripts, Meditech)

Compliance Services

- Watson IoT
- Blockchain
- Med Devices

# X-Force Command Center Experience--Cambridge

- **What is the X-Force Command Center?**  
It is a state-of-the-art facility that immerses clients/potential clients in a **simulated Security Operations Center (SOC)** using tactics and protocols designed to anticipate and defend against current and future cyber threats. It will provide critical cyber security-related crisis leadership skills in a **safe “live fire” environment** where participants can experience the effects of live malware. The participants will operate real tools, investigate active infections, and respond to internal and external cyber security events.
- **Who is the audience?**  
C-level execs, board members or security professionals.
- **Is there prep work required before the visit?**  
*No prep work is required. Each participant will have step by step instructions that they will follow to complete the scenario*
- **How long is the experience?**  
*Minimum of 6 hours*
- **What are the roles the audience will be playing?**  
*Security Operations Center roles. For example SOC Tier 1 Analyst, SOC Lead Analyst, SOC Manager, etc. Minimum attendee requirement is 9.*
- **What is the take-away?**  
Participants will return to their organizations with a greater understanding of security best practices, the importance of implementing a security strategy, and the leadership skills.

# A global leader in enterprise security

## IBM Security

- **#1** fastest growing of the Top 5 security vendors\*
- **8,000+** employees
- **17,500+** customers
- **133** countries
- **3,500+** security patents
- **20** acquisitions since 2002

\* According to 2015 Gartner Market Share

# THANK YOU

Statement of Good Security Practices: IT system security involves protecting systems and information through prevention, detection and response to improper access from within and outside your enterprise. Improper access can result in information being altered, destroyed, misappropriated or misused or can result in damage to or misuse of your systems, including for use in attacks on others. No IT system or product should be considered completely secure and no single product, service or security measure can be completely effective in preventing improper use or access. IBM systems, products and services are designed to be part of a lawful, comprehensive security approach, which will necessarily involve additional operational procedures, and may require other systems, products or services to be most effective. IBM does not warrant that any systems, products or services are immune from, or will make your enterprise immune from, the malicious or illegal conduct of any party.
